

# Notes for

**Level:** Grades 1-3

**Recommended # of Players:** 3

**Materials:** Deck of *Salute* cards (4 each of numbers 1-10) **or number cards from standard deck of playing cards**

**Math Skills:** Addition of 2 numbers, 1-10; missing addends, 1-10; subtraction

## **Mathematical benefits:**

Salute is designed to encourage fluency in addition and subtraction using numbers 1-10. Students are given a total, and can see the addend their opponent holds, which then requires them to find a missing addend. This form of questioning asks students to consider the part- whole relationships in numbers. Although the announcer does not hold a card, he or she must initially add the numbers and give the players their sum. The announcer must also check the other student's answers, and is therefore actively involved in computations.

# Salute!

**Materials:** Salute Cards (4 each of numbers 1-10)

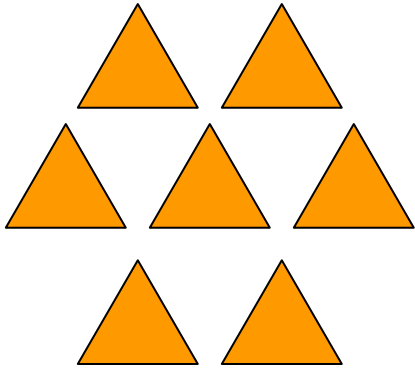

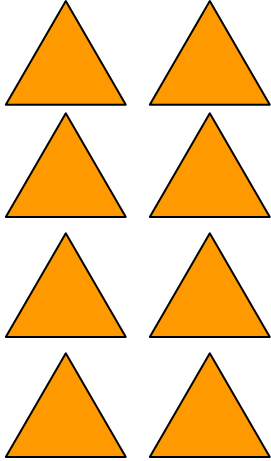

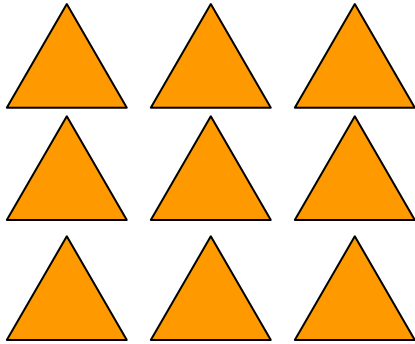

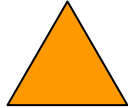

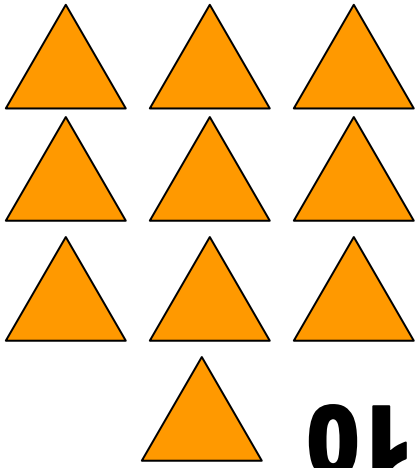

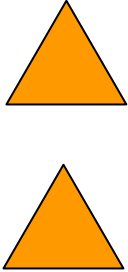

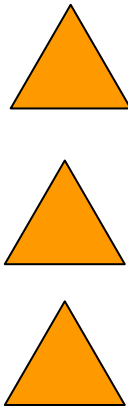

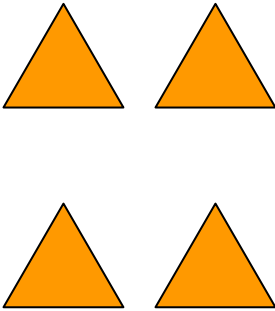

**Number of players:** 3

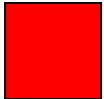

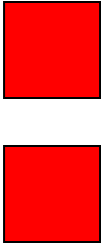

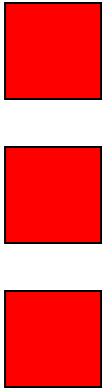

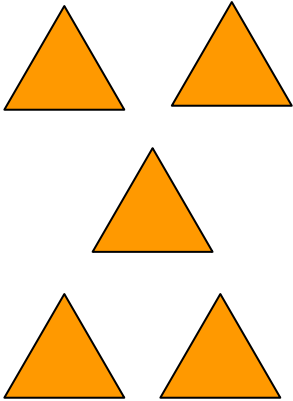

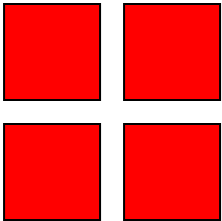

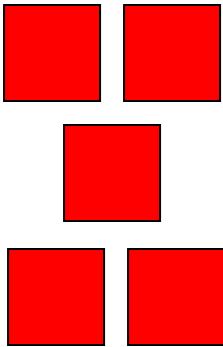

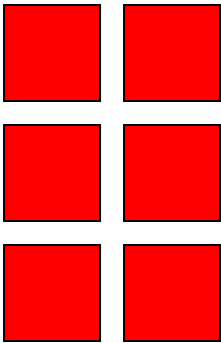

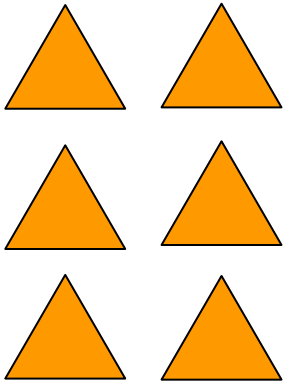

**Objective:** To collect the most cards by figuring out your opponent's number.

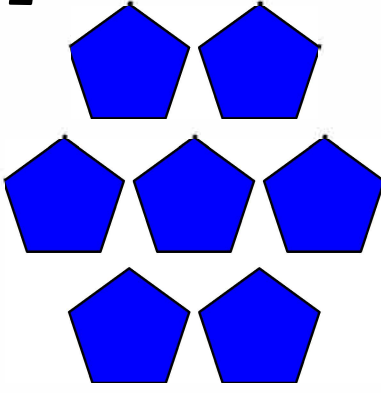

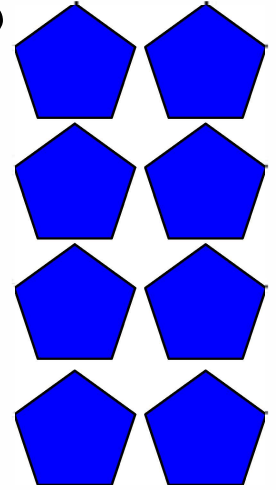

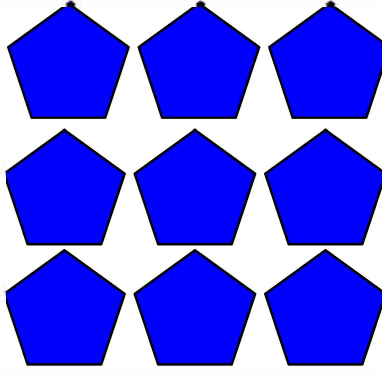

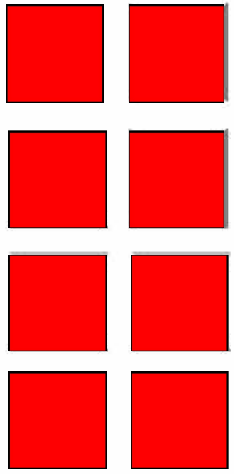

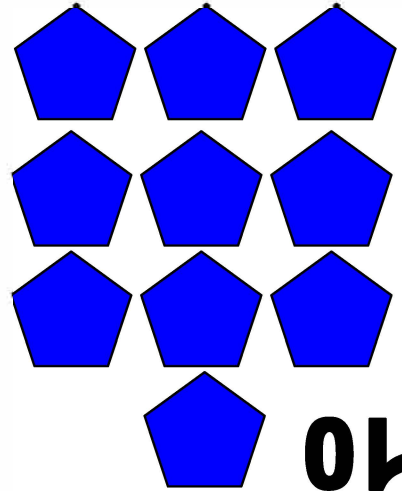

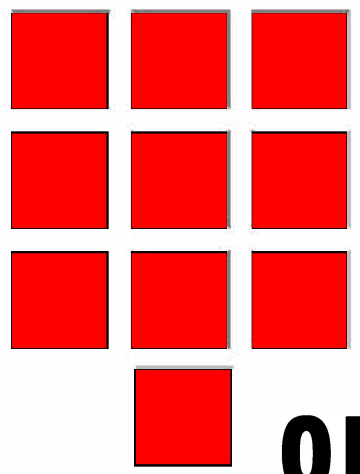

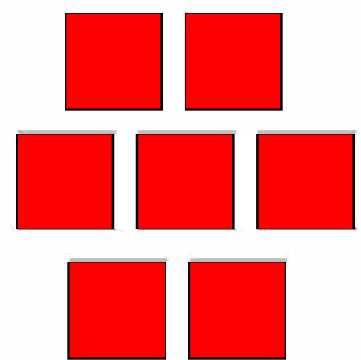

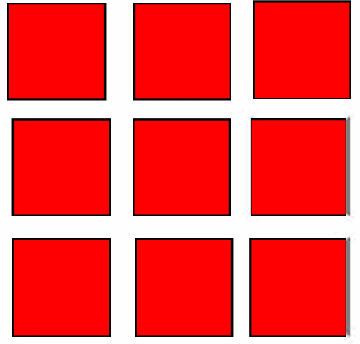

**How to play:**

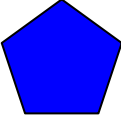

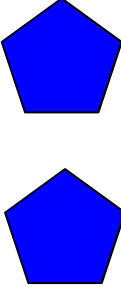

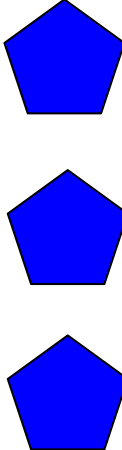

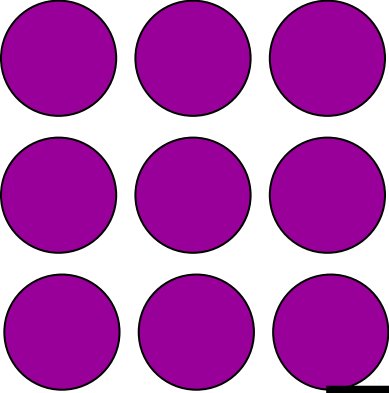

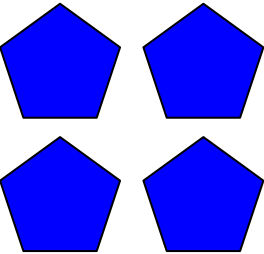

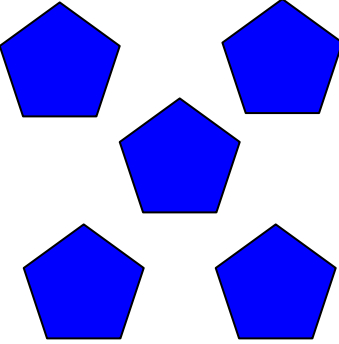

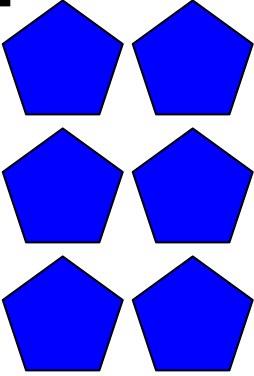

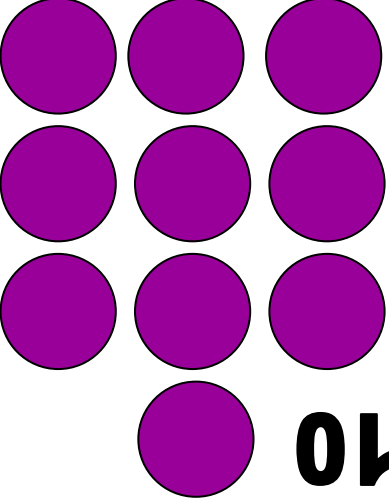

1. Players decide which two players will play against each other and which player will be the announcer.
2. The announcer deals the cards to the two players so that each player has the same number of cards. Players put the cards face down in a stack in front of them, without looking at the cards.
3. The two players face each other. When the announcer says "Salute!" the two players take their top card from their stack and without looking at it, hold it on their forehead so that the other player can see the number.
4. The announcer tells the players the sum of the two numbers.
5. The two players each have one chance to tell the announcer what number card they are holding. If they are correct, they keep their card. If they are wrong, they must give their card to the other player.
6. The winner is the player who collects the most cards.
7. The winner becomes the announcer for the next round.
